Miller Formless Co.

Location: McHenry, IL USA

Industry: Construction

Product: KLEEN KOTE

Background:

With nearly 40 years of experience, Miller Formless Co. has manufactured and sold construction equipment for bridge, road, curb, barrier, and sidewalk development. Their vast knowledge of the "formless" placement of concrete for infrastructure has allowed them to develop machines such as: pavers and slipforms for: barrier, curb, bridge, paving and sidewalk development on a national and international level. Miller Formless Co. continually seeks out ways to help their customers and extend the life and reliability of their machinery so customers can reap the benefits. That is why Miller Formless Co. provides their customers a gallon of KLEEN KOTE with every new and remanufactured machine to prevent stickage and buildup of concrete while on the job.

Use:

Miller Formless Co. wanted to find a way to extend the life of their machinery as well as create an added benefit for their customer. KLEEN KOTE did just that. Miller Formless Co. found that when customers spray their machines with KLEEN KOTE, they protect the machine from stickage and buildup of concrete allowing the customer to use the machine for longer durations during the day. It also allows the machine operator to spray the machinery the night before after power washing and while the machine is still wet, creating even less downtime and greater protection.

Results:

- **Decrease in machine downtime** – Machine operators did not have to start and stop in the middle of the project to clean the machine or remove buildup. They also didn't have to wait for the machine to dry before prepping for the next day.
- **Protective** – Created a protective barrier to prevent concrete buildup and stickage on the entire machine including protecting the controls, wiring and electronics.
- **Easy to use** – Mixed with water and sprayed on machines the night before, made the machines ready for use each day.
- **Innovative** – A first of its kind, KLEEN KOTE is a water-based release agent that prevented stickage and buildup during use and continued to protect the machine when not in use by preventing corrosion.
- **Environmentally & user friendly** – The machine operators and other employees did not need special equipment or clothing to handle, apply or remove KLEEN KOTE.

Miller Formless Co. has provided KLEEN KOTE with their machines for over 12 years and pledges that providing KLEEN KOTE with their machines creates ultimate benefits for their customers. For more information on how to purchase Miller Formless Co.'s placing machinery, you can visit them at: www.millerformless.com and for other usage suggestions for KLEEN KOTE in the construction industry, you can visit us on the internet at: www.4progressive.com.
